Progression of Skills- Science KS1 and KS2

	Y1	Y2	Y3	Y4	Y5	Y6
Animals including Humans	Pupils should be taught to: • identify and name a variety of common animals including fish, amphibians, reptiles, birds and mammals; • identify and name a variety of common animals that are carnivores, herbivores and omnivores; • describe and compare the structure of a variety of common animals (fish, amphibians, reptiles, birds and mammals including pets); • identify, name, draw and label the basic parts of the human body and say which part of the body is	Pupils should be taught to: • notice that animals, including humans, have offspring which grow into adults; • find out about and describe the basic needs of animals, including humans, for survival (water, food and air); • describe the importance for humans of exercise, eating the right amounts of different types of food, and hygiene.	Pupils should be taught to: • identify that animals, including humans, need the right types and amount of nutrition, and that they cannot make their own food; they get nutrition from what they eat; • identify that humans and some other animals have skeletons and muscles for support, protection and movement.	Pupils should be taught to: • describe the simple functions of the basic parts of the digestive system in humans; • identify the different types of teeth in humans and their simple functions; • construct and interpret a variety of food chains, identifying producers, predators and prey.	Pupils should be taught to: • describe the changes as humans develop to old age.	Pupils should be taught to: • identify and name the main parts of the human circulatory system, and describe the functions of the heart, blood vessels and blood; • recognise the impact of diet, exercise, drugs and lifestyle on the way their bodies function; • describe the ways in which nutrients and water are transported within animals, including humans.
	associated with each sense.					

Plants	Pupils should be taught to: • identify and name a variety of common wild and garden plants, including deciduous and evergreen trees; • identify and describe the basic structure of a variety of common flowering plants, including trees.	Pupils should be taught to: • observe and describe how seeds and bulbs grow into mature plants; • find out and describe how plants need water, light and a suitable temperature to grow and stay healthy.	Pupils should be taught to: • identify and describe the functions of different parts of flowering plants: roots, stem/trunk, leaves and flowers; • explore the requirements of plants for life and growth (air, light, water, nutrients from soil, and room to grow) and how they vary from plant to plant; • investigate the way in which water is transported within plants; • explore the part that flowers play in the life cycle of flowering plants, including		
			pollination, seed formation and seed dispersal.		

Living Things and their Habitats		Pupils should be taught to: • explore and compare the differences between things that are living, dead, and things that have never been alive; • identify that most living things live in habitats to which they are suited and describe how different habitats provide for the basic needs of different kinds of animals and plants, and how they depend on each other. • identify and name a variety of plants and animals in their habitats, including microhabitats;	Pupils should be taught to: recognise that living things can be grouped in a variety of ways; explore and use classification keys to help group, identify and name a variety of living things in their local and wider environment; recognise that environments can change and that this can sometimes pose dangers to living things.	Pupils should be taught to: • describe the differences in the life cycles of a mammal, an amphibian, an insect and a bird; • describe the life process of reproduction in some plants and animals.	Pupils should be taught to: • describe how living things are classified into broad groups according to common observable characteristics and based on similarities and differences, including micro-organisms, plants and animals; • give reasons for classifying plants and animals based on specific characteristics.
----------------------------------	--	---	---	--	---

	I.,		
	their food from		
	plants and other		
	animals, using the		
	idea of a simple		
	food chain, and		
	identify and name		
	different sources		
	of food.		
es			Pupils should be
Evolution and Inheritance			taught to:
irit			 recognise that living
l Å			things have changed
þ			over time and that
an			fossils provide
on			information about
<u> </u>			living things that
0 /			inhabited the Earth
"			
			millions of years ago;
			recognise that living
			things produce
			offspring of the same
			kind, but normally
			offspring vary and are
			not identical to their
			parents;
			identify how animals
			and plants are adapted
			to suit their
			environment in
			different ways and that
			adaptation may
			lead to evolution.

	depending on which poles are facing.	
Light	Pupils should be taught to: • recognise that they need light in order to see things and that dark is the absence of light; • notice that light is reflected from surfaces; • recognise that light from the sun can be dangerous and that there are ways to protect their eyes; • recognise that shadows are formed when the light from a light source is blocked by an opaque object; • find patterns in the way that the size of shadows change.	Pupils should be taught to: • recognise that light appears to travel in straight lines; • use the idea that light travels in straight lines to explain that objects are seen because they give out or reflect light into the eye; • explain that we see things because light travels from light sources to our eyes or from light sources to objects and then to our eyes; • use the idea that light travels in straight lines to explain why shadows have the same shape as the objects that cast them.

			\neg
Sound		Pupils should be	
l og		taught to:	
"		• identify how	
		sounds are made,	
		associating some	
		of them with	
		something	
		vibrating;	
		• recognise that	
		vibrations from	
		sounds travel	
		through a	
		medium to the	
		ear;	
		• find patterns	
		between the pitch	
		of a sound and	
		features of the	
		object that	
		produced it;	
		• find patterns between the	
		volume of a	
		sound and the	
		strength of the	
		vibrations that	
		produced it;	
		recognise that	
		sounds get	
		fainter as the	
		distance from the	

		cound course	
		sound source	
		increases.	
ല			Pupils should be
рас			taught to:
d S			describe the
an			movement of the
Earth and Space			Earth and other
Еаі			planets relative
			to the sun in the
			solar system;
			describe the
			movement of the
			moon relative to
			the Earth;
			describe the
			sun, Earth and
			moon as
			approximately
			spherical bodies;
			use the idea of
			the Earth's
			rotation to explain
			day and night and
			the apparent
			movement of the
			sun across the sky.

Electricity	Pupils should be taught to: • identify common appliances that run on electricity; • construct a simple series electrical circuit, identifying and naming its basic parts, including cells, wires, bulbs, switches and buzzers; • identify whether or not a lamp will light in a simple series circuit, based on whether or not the lamp is part of a complete loop with a battery; • recognise that a switch opens and closes a circuit and associate this with whether or not a	Pupils should be taught to: • associate the brightness of a lamp or the volume of a buzzer with the number and voltage of cells used in the circuit; • compare and give reasons for variations in how components function, including the brightness of bulbs, the loudness of buzzers and the on/off position of switches; • use recognised symbols when representing a simple circuit in a diagram.
-------------	--	---

	lamp lights in a simple series circuit;	
	• recognise some	
	common	
	conductors and	
	insulators, and	
	associate metals	
	with being good	
	conductors.	

Materials	Everyday Materials Pupils should be taught to: • distinguish between an object and the material from which it is made; • identify and name a variety of everyday materials, including wood, plastic, glass, metal, water, and rock; • describe the simple physical properties of a variety of everyday materials; • compare and group together a variety of everyday materials on the basis of their simple physical properties.	Uses of Everyday Materials Pupils should be taught to: • identify and compare the suitability of a variety of everyday materials, including wood, metal, plastic, glass, brick, rock, paper and cardboard for particular uses; • find out how the shapes of solid objects made from some materials can be changed by squashing, bending, twisting and stretching.	Rocks Pupils should be taught to: • compare and group together different kinds of rocks on the basis of their appearance and simple physical properties; • describe in simple terms how fossils are formed when things that have lived are trapped within rock; • recognise that soils are made from rocks and organic matter	Pupils should be taught to: • compare and group materials together, according to whether they are solids, liquids or gases; • observe that some materials change state when they are heated or cooled, and measure or research the temperature at which this happens in degrees Celsius (°C); • identify the part played by evaporation and condensation in the water cycle and associate the rate of evaporation with temperature.	Pupils should be taught to: • compare and group together everyday materials on the basis of their properties, including their hardness, solubility, transparency, conductivity (electrical and thermal), and response to magnets; • know that some materials will dissolve in liquid to form a solution, and describe how to recover a substance from a solution; • use knowledge of solids, liquids and gases to decide how mixtures might be separated,	
-----------	---	--	---	--	--	--

	including through
	filtering, sieving
	and evaporating;
	• give reasons,
	based on
	evidence from
	comparative and
	fair tests, for the
	particular uses
	of everyday
	materials,
	including metals,
	wood and plastic;
	• demonstrate
	that dissolving,
	mixing and
	changes of state
	are reversible
	changes;
	• explain that
	some changes
	result in the
	formation of new
	materials, and
	that this kind of
	change is not
	usually reversible,
	including changes
	associated
	with burning and
	the action of acid

	Ţ		on bicarbonate of	
		1	soda.
